

# PSN-1 + GNOMe: Toward Nature Machine Intelligence

**PSN-1 Training Proof**  
(41,769 params, 9-domain architecture)

**9 Physics Domains in One Architecture**

**GNOMe Circuit Extraction**

**Expected Performance (Projected)**

**NMI-Level Contributions:**

**PSN-1:**

- Single architecture for all physics
- E(3)-equivariant + attention pathway
- Conservation law discovery (learned)
- Cross-domain transfer capability

**GNOMe:**

- Zero-query circuit extraction (O(1))
- Graph-native representation
- Cross-model transfer (GNN on circuits)
- IOI circuit validation framework

**PSN-1 Universal**

Params: 41,769  
Backbone: E(3)-equivariant  
Head: Multi-head attention  
Training: PINN + conservation  
Hardware: CPU (POC)  
Domains: 9/9 covered

**GNOMe**

Units: 156 (GPT-2 Small)  
Edges: 1,583  
Method: Cosine-sim adjacency  
Validation: Wang et al. circuit  
Complexity: O(1) per model
